RECAP

INTRODUCTION

DAIRE is reputation engine that calculates and provide credit scores for groups and individuals. Example entrepreneurs, small groups of women and youth, and small-scale farmers.

PROBLEM STATEMENT

In Tanzania, small-scale farmers, youth, and women often struggle to access suitable loans due to lacking of a credit score system and the lack of accurate assessment of how they can responsibly get credited. This limits their ability to sustain and grow their livelihoods, contributing to poverty and reduction of the national income.

MAIN OBJECTIVE

To develop reputation engine that calculates and provides credit score using blockchain technology and AI for evaluation.

SCOPE

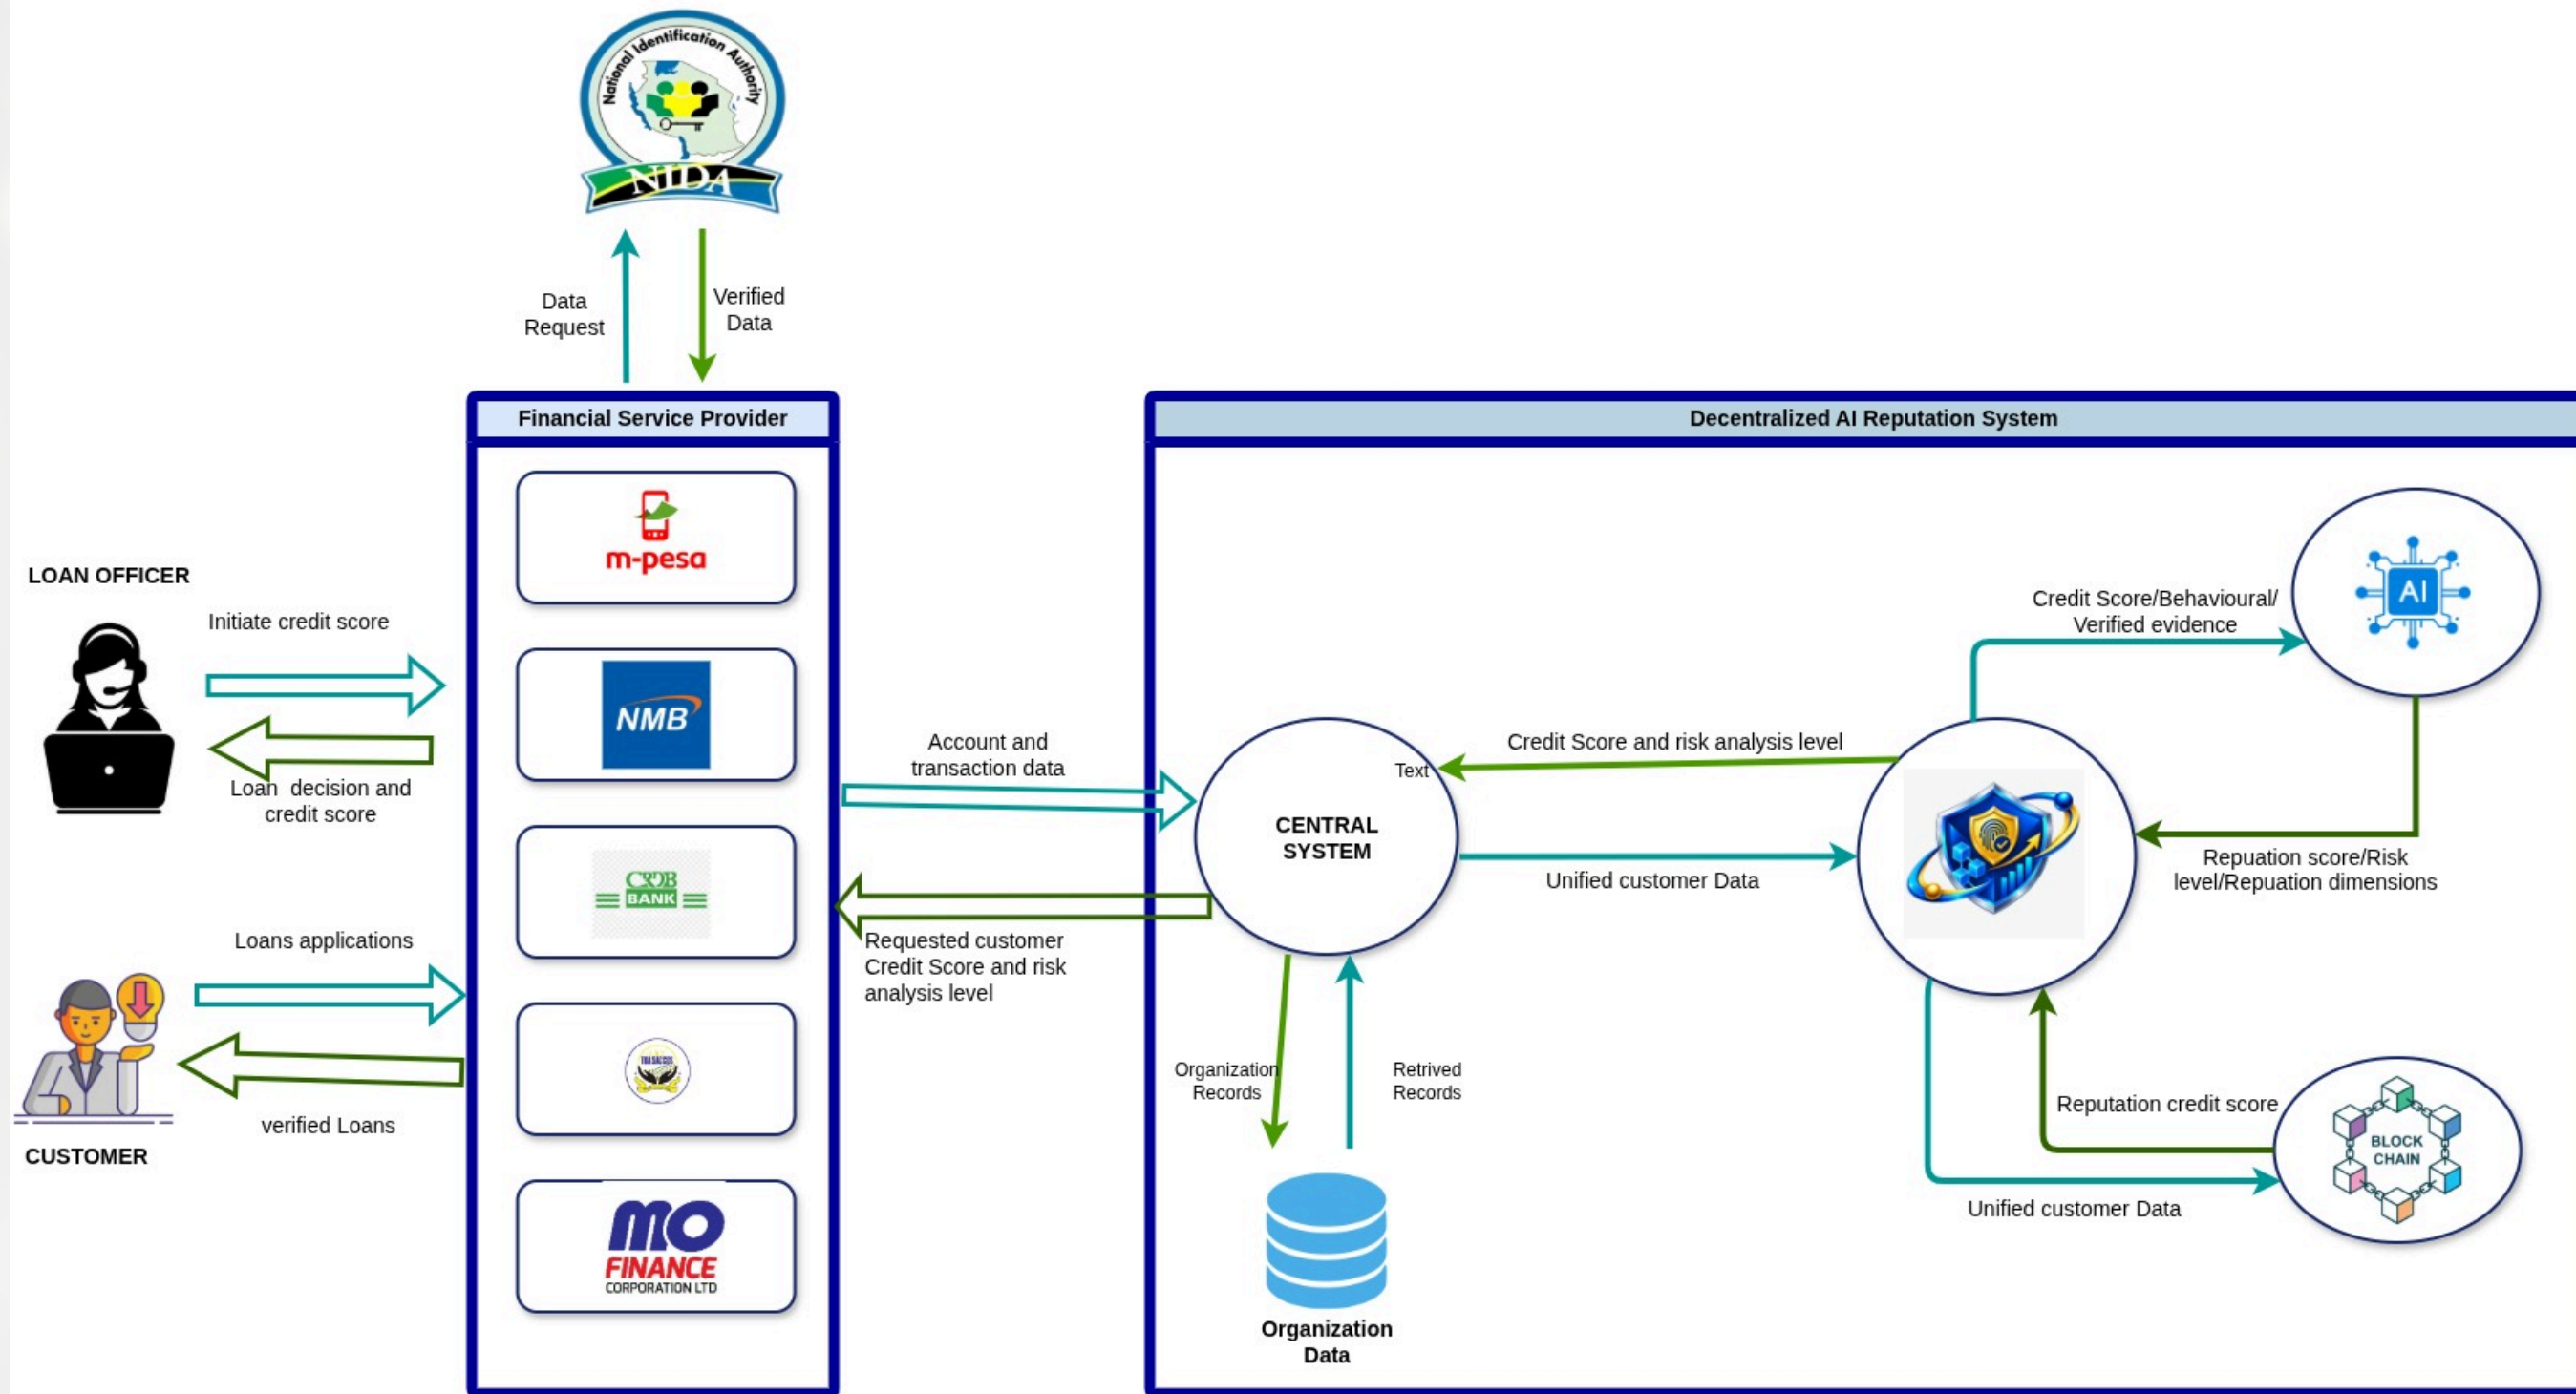

- 1. Developing the lenders systems.**
- 2. To develop the Nida system**
- 3. Develop central system(web2) that will allow the intergrations of lenders systems.**
- 4. Intergration of Web2 with Web3**
- 5. To develop blockchain that will help to calculate credit score**
- 6. To develop an AI model to provide the recomandationa and reputation risk**

CONCEPTUAL DIAGRAM

DAIRE CONCEPTUAL DIAGRAM

WHAT WE HAVE ARCHIVED

- 1. We have develop an algorithm for calculating credit scores and deploy using the local network like hardhat**
- 2. We have developed a two lender system**
- 3. To develop AI model for that show the reputation score.**

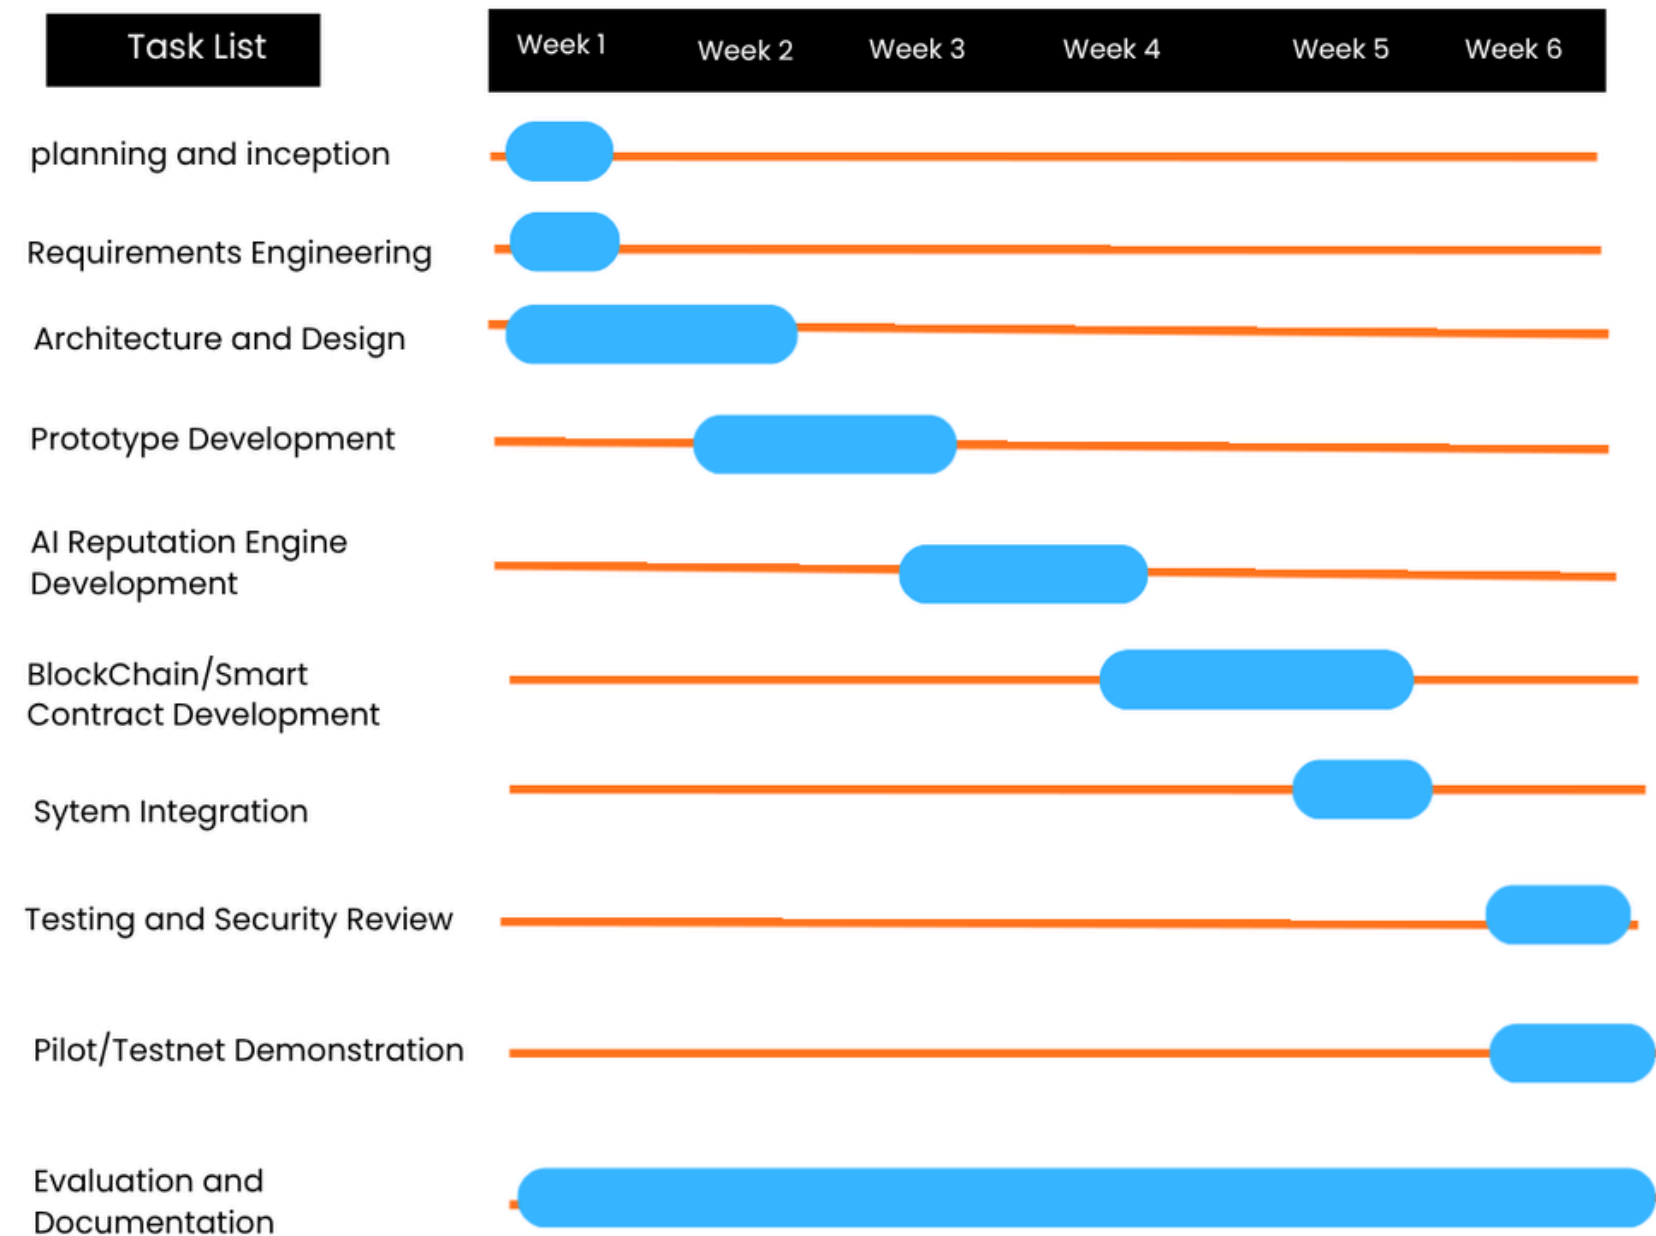

PROBLEM FACED

**1. We have faced the problem of network for
deploying the smart contract**
